

Instruction for Sputnik

Cut out part J and K.

Score and fold part J - but do not glue it together!

Then glue part J on the top of part K.

Make a hole in part K.

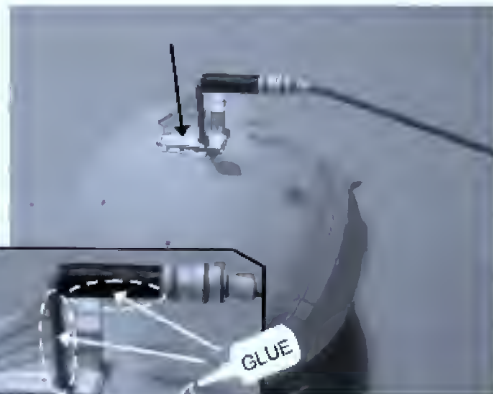

Use a scrap piece of wire to test, that the hole is wide enough.

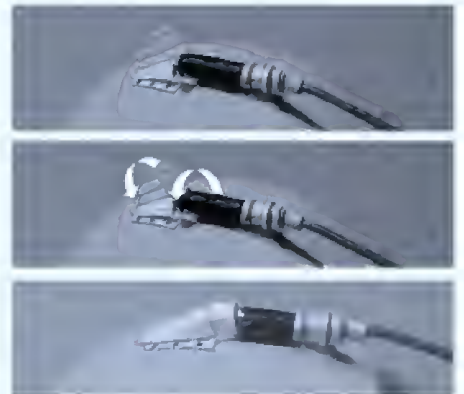

Glue part K to the ball. Make sure, that the hole in K is right over the hole in the ball.

When all four pieces of K are glued to the ball, it is time to attach the antenna.

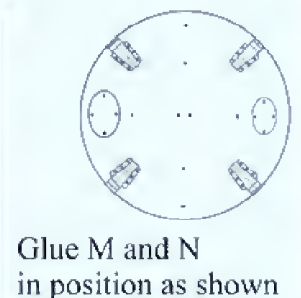

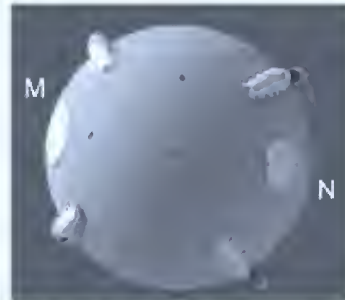

Cover the tip of the antenna and the under side of part H with glue. Then carefully press the antenna in to the ball.

While keeping the antenna in position wrap and glue part J around it. Allow to dry.

Fold back the little triangle at tip of J as shown. Glue it in place

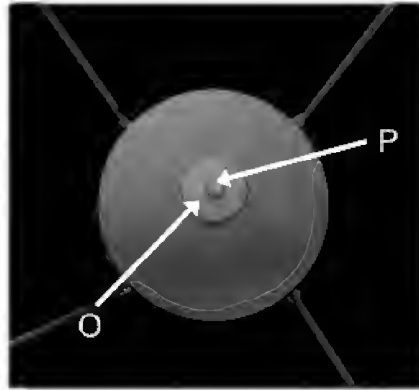

Glue M and N in position as shown

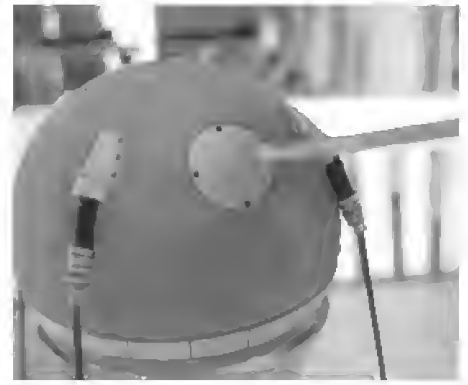

Instruction for Sputnik

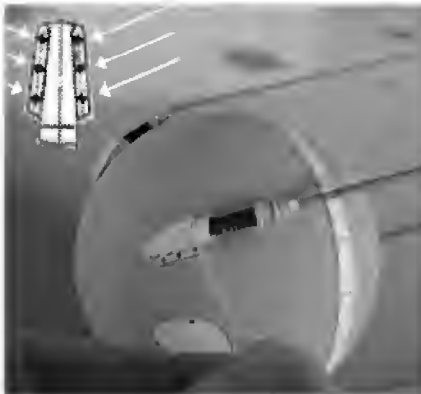

Glue part P to thick cardboard.
When dry - cut out.

Glue part O and P to the bottom
of the satellite.

Ad tiny drops (1 mm) of white glue
to part M and N to act as rivets.

Then ad "micro" dots (0,5 mm)
of white glue to K.

Roll part L to a tube. Then glue it to
The antenna as shown.

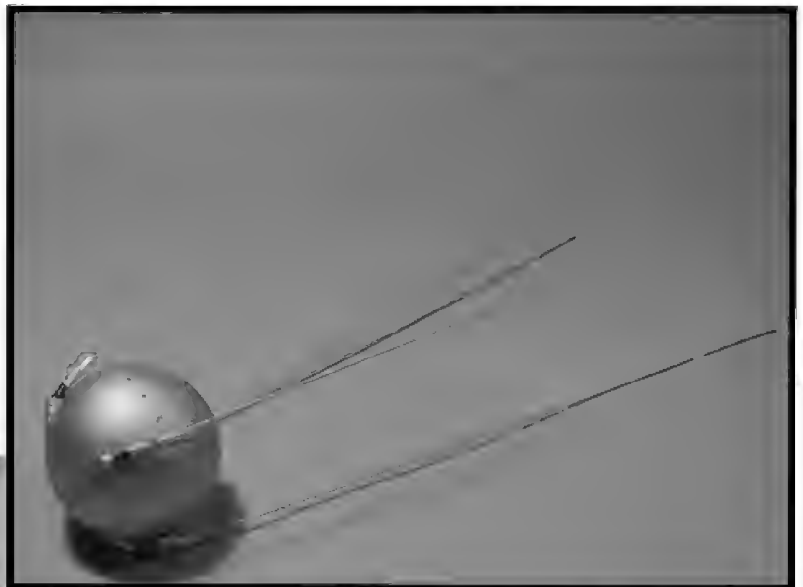

Finally ad a drop of glue on
each side of L.

Before painting the model, close any
remaining gabs between the paper parts
and the ball.

Spray the model silver all over.

When dry paint part of the antenna
black as shown below.

Your sputnik 1 model is finished.

You are most welcome to send me pictures of the finished
model - send them to nielspapermodels@yahoo.com
